

Sai Kedarisetti

Full Stack Developer — React, Next.js, Node.js — SaaS & ERP Systems

+91 8074322007 kedarisettysai440@gmail.com linkedin.com/in/sai-kedarisetti github.com/12106457 Portfolio

Summary

Full Stack Developer with 1.5+ years of experience building scalable SaaS and ERP platforms using React, Next.js, Node.js, and MySQL. Proven ability to design production-grade systems, optimize API performance by 40%, and improve application performance by 30%. Experienced in building high-volume dashboards, integrating third-party APIs, and delivering secure, scalable backend architectures.

Key Achievements

- Built ERP systems from scratch supporting financial workflows and reporting
- Optimized 100+ REST APIs, reducing latency by 40% and improving system efficiency
- Improved dashboard performance by 30% for high-volume datasets and real-time analytics
- Developed analytics dashboards with 50+ dynamic filters using AG Grid and ApexCharts
- Engineered 70+ reusable components, reducing development time by 35%

Technical Skills

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3

Frontend: React.js, Next.js, Redux Toolkit, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, REST API Development, JWT Authentication

Database: MongoDB, MySQL, Sequelize ORM

Tools & Libraries: Git, GitHub, Postman, Swagger, AG Grid, ApexCharts, Stripe, RabbitMQ

Concepts: Scalable Systems, Performance Optimization, API Design, Authentication & Authorization

Professional Experience

Software Developer

Sep 2024 – Present

Factiify, Gurugram

- Led frontend development of ERP fintech systems, designing scalable UI architecture and reusable component libraries
- Integrated and optimized 100+ REST APIs for financial workflows, reducing latency by 40% through caching and efficient error handling
- Refactored and scaled existing ERP modules, improving dashboard performance by 30% and enhancing system reliability
- Built high-performance dashboards using AG Grid and ApexCharts with 50+ filters for real-time analytics
- Currently working as a Full Stack Developer on a US-based Background Verification platform, designing secure backend APIs, database schemas, and responsive frontend workflows.
- Integrated third-party services (ClearStar) with webhook-based asynchronous processing pipelines
- Implemented role-based access control, audit logging, and secure middleware for production-grade systems

Key Projects

Enterprise ERP Platform

Frontend Developer

React, Next.js, Tailwind CSS

- Engineered a production-grade ERP platform supporting financial operations, reporting, and workflow automation
- Architected scalable frontend structure with reusable component patterns and optimized routing
- Improved dashboard rendering performance for high-volume data views and real-time processing
- Integrated complex business APIs enabling seamless financial data workflows

Background Verification Platform (US Market)

Full Stack Developer

React, Node.js, Express.js, MySQL, Sequelize

- Built end-to-end background screening system managing multi-stage workflows and case tracking
- Designed secure REST APIs and optimized MySQL schemas for scalable data handling
- Integrated third-party verification services with webhook-based asynchronous updates
- Implemented role-based access control and compliance-driven workflow tracking
- Developed real-time dashboards with structured state management and monitoring systems

OnService Provider App

Frontend Developer

React Native, Expo, TypeScript, Redux Toolkit

- Built a cross-platform mobile application for service providers to manage bookings, earnings, employees, and services
- Integrated 100+ backend APIs with JWT authentication, Redux state management, and offline data handling
- Implemented real-time features including push notifications, Stripe payments, and google map integration.

Education

Bachelor of Technology in Computer Science and Engineering

Lovely Professional University

CGPA: 8.22/10

2021 – 2025
